 Security Notes

- Admin password is hardcoded in server.ts — changing it requires editing the server file directly.
- Technician accounts can only be created by the Admin inside the Admin Dashboard.
- Customer accounts are self-registered via the /signup page only.
- All passwords are Bcrypt hashed (salt rounds: 10) in database.json except Admin.
- Blocked users are rejected in real-time on every API request via JWT middleware.
- CREDENTIALS.md and database.json are excluded from GitHub via .gitignore.
